

**EK INNOVATION**

**CRH PIN TREATMENT – RIGID & LONG LIFE!**

EK's exclusive CRH pin treatment provides an extremely hard outside coating and softer inside to increase strength and reduce chain wear. The Chromium Carbide pin surface coating also offers superior impact and shock absorption while reducing oxidation caused by nature's elements.

**SCREW TYPE MASTER LINK (SLJ)**

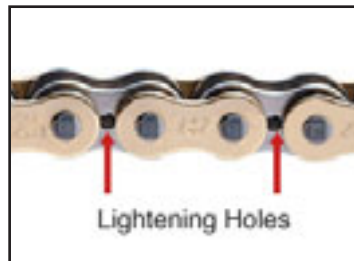

EK's screw type master links do not require any special tools for installation. This unique patented link gives a rivet-like fit, using only an 8mm wrench and a pair of pliers.

EK Chain is headquartered in Kaga, Japan. In 1974 EK introduced the world's first sealed O-ring chain. Quality is an obsession at EK Chain. Research and development has always focused on creating technological breakthroughs and developing original ideas. EK's invention of the O-ring sealed chain was based on years of accumulated technology, exemplifying a relentless commitment to innovation that continues to drive everything they do.

**LIGHTENING HOLES**

Lightening holes on the side plate reduce the chain's overall weight by 3%, without compromising tensile strength. These holes extend the service life by dissipating heat & helping reduce dirt and mud build-up.

**QX-RING & NX-RING**

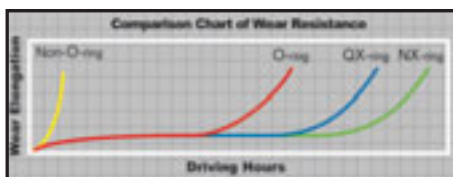

Quadra-X Ring design reduces friction by as much as 40% because of smaller contact area. The X-Ring's 4 point contact patch also offers better sealing than conventional o-rings. Lab tests show the Quadra-X ring chains last 50% longer than a standard O-ring chain. The new NX-ring chains last 15% longer than the QX-Ring chain!

**Type of Connecting Link**

To find out what type of connecting link comes standard with your chain or what type of links are optional, please refer to the specification chart of each chain.

- SPJ** **Clip-Type (slip fit)**  
Easy to install. Comes standard with some nonsealed light-duty chains. Can be installed with a standard pair pliers. Comes standard with motorcross chains.
- SKJ** **Clip Type (semi-press fit)**  
The SKJ is easy to install and very similar to a standard SPJ link. The SKJ's re-designed link plate requires additional pressure to push onto the connecting pins but offers increased dependability and a tighter fit. Comes standard with off-road and drag racing chains. Can easily be installed with a standard pair of pliers.
- MLJ** **Rivet-Type**  
MLJ is our most dependable connecting link, more commonly used on street machines. Requires special riveting tool to install.
- SLJ** **Screw Type**  
The SLJ is easy to install and a very dependable alternative. Patented mechanism allows easy installation with a wrench and a pair of pliers. Available only for selected sealed chains.

**EK CHAIN**
