

**DIRT BIKE**

**IDS2 SERIES**

Want to add more dirt to your competition's diet?

SuperTrapp's internal disc diffuser system has proven itself on the track time and time again. By adding or subtracting discs in the exhaust outlet, you can adjust the powerband and sound of your bike. More discs means more flow – which means more power! Less makes it run quieter and delivers more low-end torque. Depending on track conditions and terrain, it just might be the edge you need.

Because the lightweight aluminum IDS2 features internal discs, mud can't clog them. A unique contoured end cap design also prevents fender melting. So the only thing you end up scorching is the pack behind you.

\* Use of an Open End Cap negates the spark arrestor function.

**4" ALUMINUM RACING SERIES**

Old dirt bikes never die, they just get better when you add this SuperTrapp adjustable disc diffuser system. By adding or subtracting discs, you can adjust the powerband and sound of your dirt bike. More discs make it run louder and faster. Less makes it run quieter and delivers more low-end torque. Use an optional open end cap to get even more flow and power – the equivalent of adding 3 to 6 additional discs! Or try a closed end cap for more mid-range power. Think of the possibilities.
