

HELMET ACCESSORIES

HEADWAVE TAG

TAG, the world's first Concert Capsule™, was invented by Headwave for listening to music while wearing a helmet. With easy installation, no cables, and strong bass, TAG produces a superior acoustic experience fitting for the open road.

The Sound is immersive – the music plays from all around you. The Vibrations create powerful bass tones so you can hear and feel the music. The industrial strength, no residue, peel and stick application guarantees ease of application with no fear of your TAG unit falling off.

- Loudspeaker made for helmets ...with no speaker! Headwave uses the helmet itself as a resonating body. The helmet itself becomes the loudspeaker - That's why the sound is so awesome!
- Cable-free, Bluetooth, TAG is mounted purely externally, nothing needs to be installed inside the helmet
- Stream your navigation instructions directly inside your helmet - from your GPS or mobile phone
- Listen to music on the motorcycle in a legal way. You can still hear the important sounds from the surrounding environment. Traffic alerts, your engine, your exhaust The sound is most similar to listening to music in your car.
- Fits every helmet - The curvature is purposefully contoured for any motorcycle helmet topography
